(NAPSA)—There are two kinds of travelers in the world: those who pack light and those who wish they had. The key is to pack efficiently—whatever you need in as little space as possible. Some of the most travel-savvy people and their travel agents—offer some helpful tips and techniques for efficient packing for all types of travel:

- **Make a plan and stick to it.** As you plan your packing, be sure you must plan the contents of your suitcase. A packing list eliminates the panic of last-second packing. A packing list serves as a handy guide for repacking at the end of the trip and can be beneficial in the unfortunate event of lost or stolen luggage.
- **Check the weather forecast of the destination and plan accordingly.** Also, be sure to know the local tradition. Although many places have relaxed their dress codes, a T-shirt for dinner could be considered needlessly saucy. Even shoulder bars may have your entrance into the services as St. Peter’s Basilica in Vatican City. Bare legs for men and women are strongly discouraged. You are not prohibited at holy sites in many religions. For almost all outdoor activities, take pieces that are casual.
- **Lay out the items you intend to take to the laundry.** Be sure to lay out multitudes of items until possible, weed out single-use items and extras.
- **Travel bags are best for toiletries.** Having a travel kit perpetually stocked in a waterproof case will save packing time before the trip and aggravation after arrival. Most personal toiletry items come in inexpensive travel sizes, so purchase inexpensively travel sizes, so purchase

(NAPSA)—Not only do residential and commercial solar energy systems benefit the environment, they also offer an alternative to rising energy prices in a world that is dependent on foreign sources. The new $2,000 federal tax credit for installing a solar power system, along with some state and local programs, helps with installation costs. Also, most states allow net metering, a special metering and billing arrangement that credits the consumer for excess electricity produced by the solar energy system that is fed back to the electrical grid. More information—plus a solar calculator and directory of qualified solar installers—is available at www.FindSolar.com as a free public service.
